How to use a Viewer to demonstrate and share AutoCAD drawings

Introduction

This lesson will discuss how you can use a viewer program to work with a CAD drawing. You can use a viewer to open and close drawings, or to edit drawings. Viewer programs are not as fast as the

native AutoCAD software, but they are free. To demonstrate how a viewer works with AutoCAD, you will see a drawing. The native AutoCAD software will not be used. If you are using a computer that has a lot of memory or a high speed hard drive, you can open the file in AutoCAD and use it as a drawing. It is easier to run a viewer on a drawing than on the native AutoCAD program. This will be

demonstrated in the article, “Using a viewer to open and close drawings.” If you have not done so yet, read the lesson, “Introduction to AutoCAD.” Creating a Drawing File in AutoCAD You will create a drawing file to be viewed in AutoCAD. A drawing file is just a name for a type of file. The file is saved on your computer in the same format as is found on your paper drawing. In this lesson,

a. DWG file is saved to a folder called Tutorial. 1. Select the Drawing View tab on the ribbon. 2. Click the New button. The new drawing dialog box opens. 3. Click the Save As icon in the top-right corner of the window. 4. Choose a name for the file. The default name is created, but you can change it by clicking the Rename button. 5. Click the Save button. A dialog box appears. 6. Change the location on

your computer where the file will be saved. Click OK to save the file.

Using a Viewer to View a Drawing

You will open an existing drawing and use a viewer to view it.

1. Open the desired drawing. The Draw View tab should be active. The Drawing View is the default view in AutoCAD.
2. Click the View tab.
3. Click the Name button.
4. Type a name for the file. The name can be the original name or a new

name you want to use. 5. Click the Open button.
